Further information	

These guidelines explain how to use our brand identity and show how to apply and produce clear and consistent communications that help bring Puma Energy brand to life.

1.0

Identity elements

Our brand is made up of a number of elements that, when combined, create a powerful brand identity. These elements range from the logo, colours and typefaces, through to photography and tone of voice.

1.1
Identity elements
Symbol and logotype

The primary logo is our first choice logo for all our branding. However there are two versions, one for use on white or light backgrounds, and another for darker backgrounds.

1 Using our primary logo

Our primary logo should only appear on a white background or on uncomplicated imagery with light backgrounds so it's clearly legible. The word 'Energy' should be included on all corporate communication channels.

2 Using our reversed primary logo

A reversed version of the primary logo has been created for when it is not possible to use the primary logo due to legibility issues. Our reversed primary logo uses a white-out 'Energy' and it should only appear on uncomplicated imagery with dark backgrounds so it's clearly legible. The word 'Energy' should be included on all corporate communication channels.

1.1

Identity elements
Symbol and logotype

1 Using our white logo

This logo is for use when on a Puma Energy Red background, or when printing is restricted to one colour on a dark background.

2 Using our black logo

This logo is for use when printing is restricted to black only.

1.2

Identity elements
Exclusion zone

Exclusion zone
Always leave enough space between the logo and other visual elements.

Primary position
Always make sure the logo is positioned correctly.

1 Positioning on the page
The logo should appear in the top right of the page. There should be a space between the logo and the edge of the paper that is equivalent to the height of the logo (marked X).

Use this table to calculate the height of X.

Page width	X-height
297mm	13mm
210mm	9.5mm
148mm	6.5mm

2 The area of isolation
The area of isolation is the absolute minimum amount of space that should sit between the logo and the other visual elements. The minimum area is the height of the logo and should be increased wherever possible, to prevent other visual elements encroaching on the logo.

3 Minimum size
The minimum height is 7mm in print and 20pxls in digital media.

1.3

Identity elements

Symbol and logotype don'ts

Symbol and logotype don'ts

Our logo must be consistent across our channels and it should never be altered.

1 Logo integrity

Please ensure that the following guidelines are followed across all of our logos.

Do not crop

Do not distort

Do not change the size or position of 'Energy'

Do not change the balance of green and red

Do not rotate

Do not rearrange the elements

Do not change the colour

Do not change colour of sector copy on sector logo

Do not change the typeface

Do not add effects

Do not change typeface of sector on sector logo

Do not change size or position of sector on sector logo

1.4

Identity elements

Sector-specific logotype

These are generic logos. Some product groups are creating further identity assets - please refer to global heads for these.

Sector-specific logos

These logos are for use on product-specific literature.

1 Sector logo rules

Use the same rules about when to use and how to size the logo as you would for the primary and secondary logos.

Sector-specific logo exclusion zone

Always leave enough clear space between the logo and other elements on the page.

2 The area of isolation

The area of isolation is the absolute minimum amount of space that should sit between the logo and the other visual elements.

The minimum area is the height of the logo and should be increased wherever possible, to prevent other visual elements encroaching on the logo.

Shareholder and partner

Special Shareholder (48%)

In Partnership with...

3 Subsidiary and partnership logos

Subsidiary and partnership logos should be separated by a 0.3pt grey vertical boundary line (shown opposite).

1.5

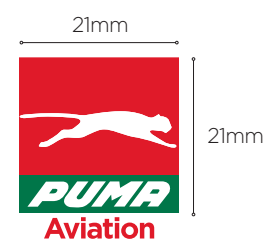

Identity elements

Square sector-specific logotype

To ensure that clear space is maintained around the logo when size constraints dictate and the primary logo isn't suitable, we have developed a square logo for limited use only.

Minimum size
The square logo should not be reproduced smaller than 21 by 21mm, the specified minimum size, as doing so compromises its readability. The minimum size is measured by the width and height of the Puma box device as illustrated.

1.6

Brand elements

Colour

Colour continues to be a fundamental yet powerful tool in the brand. Simple and balanced use of colour can communicate clarity of thought, consistency and personality. Used creatively we can turn the ordinary into the extraordinary. These show the balance of colours we use on our materials. Puma Energy's core colour is Puma Energy Red, but for further guidance the 40-30-10-10-5-5% rule is the suggested way to correctly apply the colour palette.

Litho print colours

For litho print work we use a combination of Pantone special mix colour, two Pantone spot colours and two CMYK colours.

Digital print

For digitally printed materials we use CMYK four-colour breakdowns.

Screen colour

For applications such as web or PowerPoint, we use these RGB or Hex values for the main copy.

1 The Puma Energy Red

The Puma Energy Red is a specially mixed colour available through Stehlin Hostag Ink UK. www.stehlin.co.uk.

2 Web colour

Please note that the RGB and Hex values are specially chosen and not the default Pantone breakdown.

Gilda Display

Tracking

Always ensure that text is tightly tracked. Track headlines and standfirsts at -10 to make the text more visually appealing.

Body copy and subheading font – **Gotham**

Our body copy and subheading font is Gotham. It is clean, distinctive and legible and available in a variety of weights.

A b c

Gotham Light
Gotham Book
Gotham Medium
Gotham Bold

Digital alternative font – **Effra**

For digital applications an alternative font, Effra is used. It provides complementary characteristics to Gotham and is available in a variety of weights. When Effra is not available please use Arial.

Tracking

Always ensure that text is tightly tracked. Track subheads and standfirsts at -50 and body copy at -15 to make the text more visually appealing.

Digital alternative font – **Effra**

The Puma Energy typeface for digital application is Effra, which provides complementary characteristics to Gotham. It is available in a variety of weights.

Headline font – **Gotham Condensed caps**

Our other headline font is Gothic Condensed caps. It is a bold and confident typeface that should always appear as upper case.

A B C

GOTHAM CONDENSED MEDIUM
GOTHAM CONDENSED BOLD

Note:

Gotham Condensed 30pt or below should use the Medium weight. For text above 30pt, the Bold or Medium weights can be used. The same principle applies for large format printing using a 1:10 scale.

Tracking

Always ensure that text is tightly tracked. Track headlines and standfirsts at -10 to make the text more visually appealing.

1 Where to buy

This typeface can be purchased from www.klim.co.nz

Supporting body copy font – **Domaine Text**

Our other body copy and subheading font is Domaine Display. It is an elegant modern serif font that is distinctive and legible.

DomaineText Medium Italic

Tracking

Always ensure that text is tightly tracked. Track headlines and standfirsts at -10 to make the text more visually appealing.

1.8

Identity elements

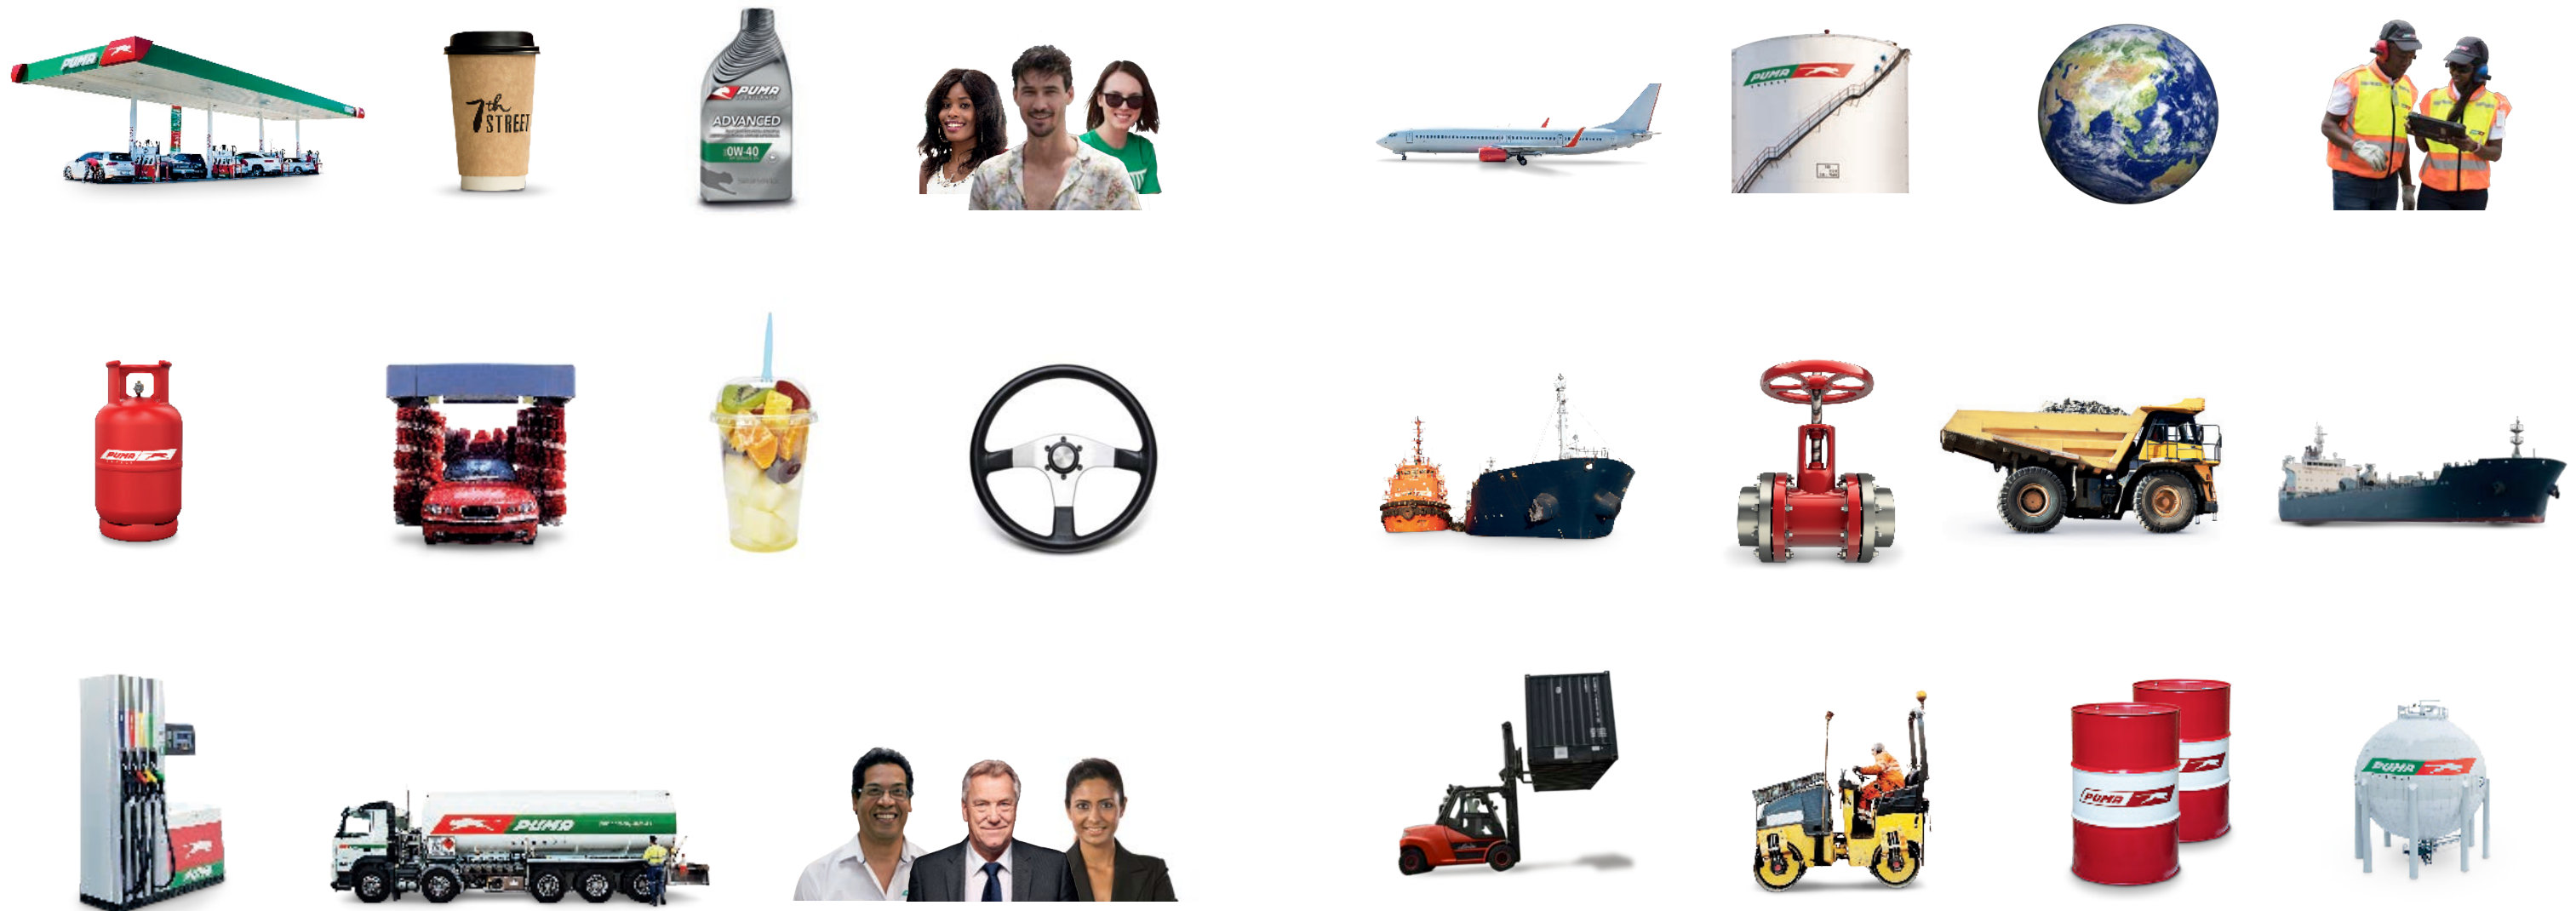

Icons

Photographic cut-outs can be used to represent different business areas or draw attention to key pieces of information. These images have a retail friendly look and feel in line with the customer first approach of the business.

Icons

Icon sets are available for the different business areas and customer groups. Please check on the central hub for the full collection.

/ BRAND GUIDELINES /

2.0

Applying the brand

So, how do we apply these brand elements in the real world of Puma Energy communications? First, know (remember) your audience. Second, stay flexible and true to the brand spirit. Third, be inspired to express the brand with attitude and in a thoughtful and inspiring way.

/ BRAND GUIDELINES /

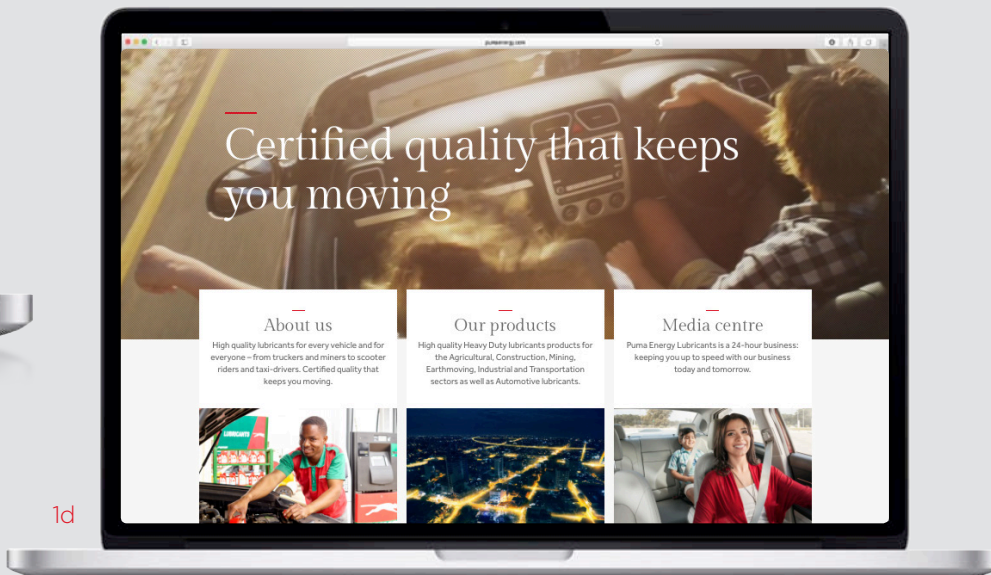

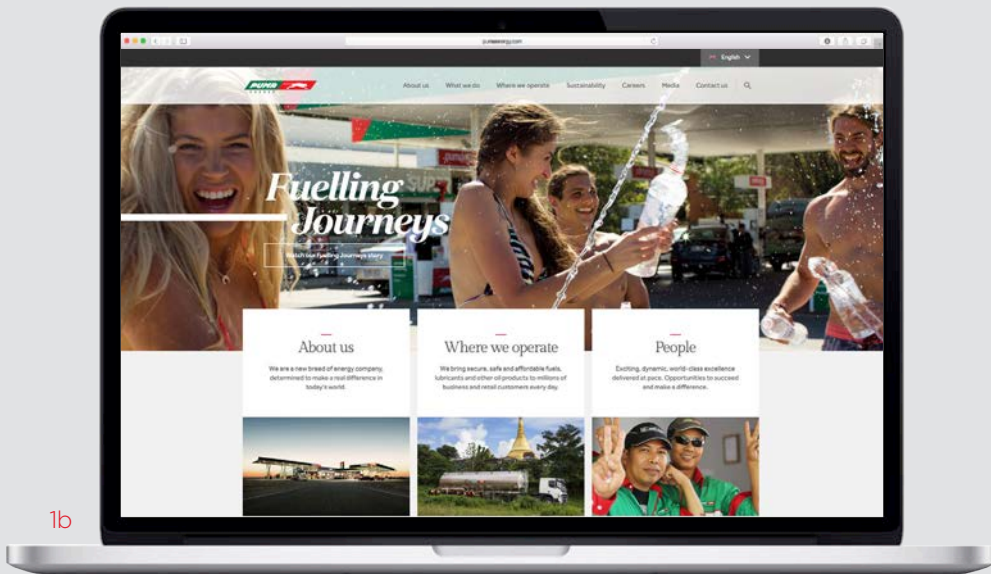

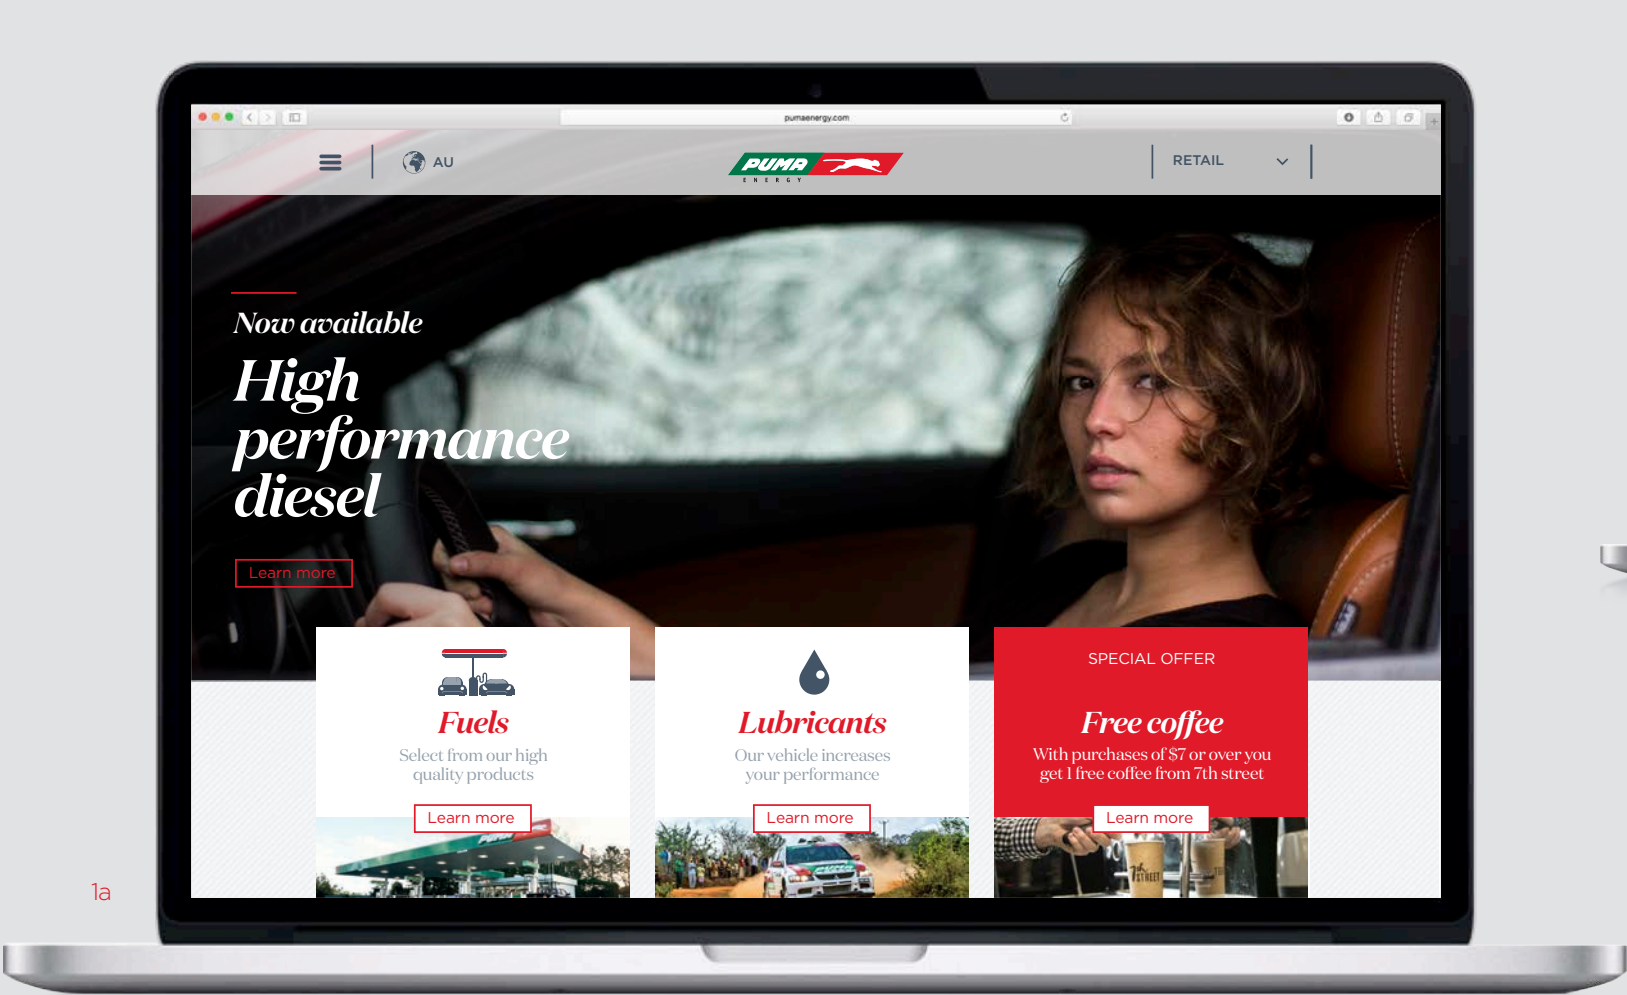

2.1

Applying the brand
Online

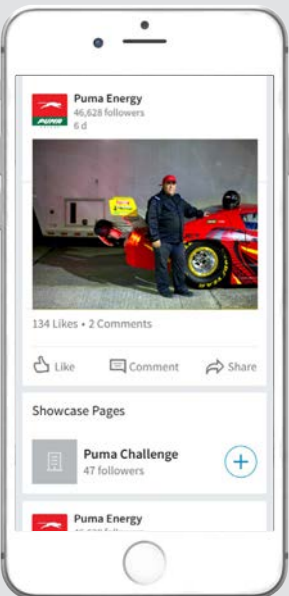

1 Corporate digital platforms

- a. Customer portal
- b. Corporate site
- c. Digital presentations
- d. Lubricants site

2 Social media platforms

Facebook, Instagram and LinkedIn

2.2

Identity elements

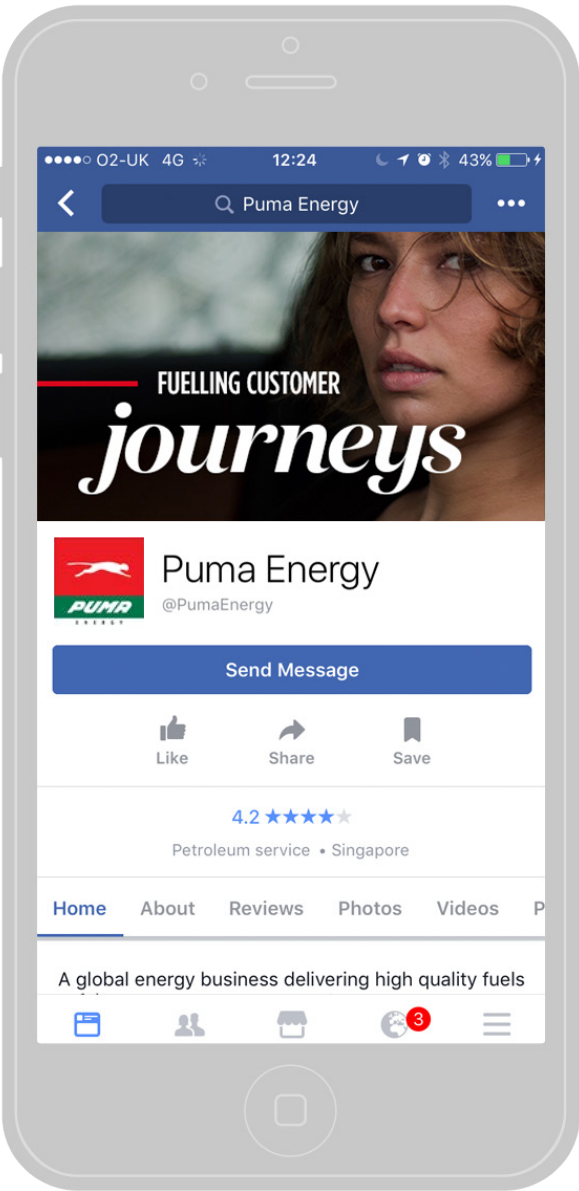

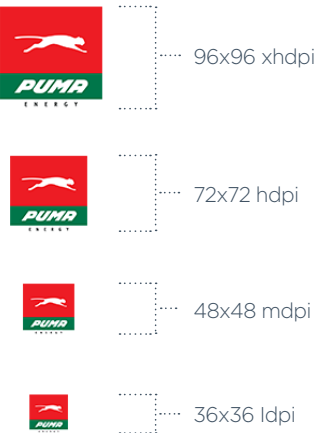

Social media

Puma Energy social media icon
The social media icon was developed for use on social media websites.

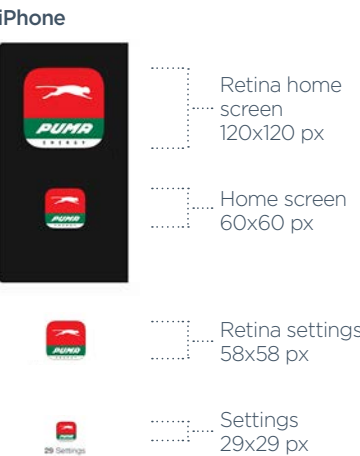

1 Puma Energy social media logo
Various sizes have been created for use across all social media platforms.

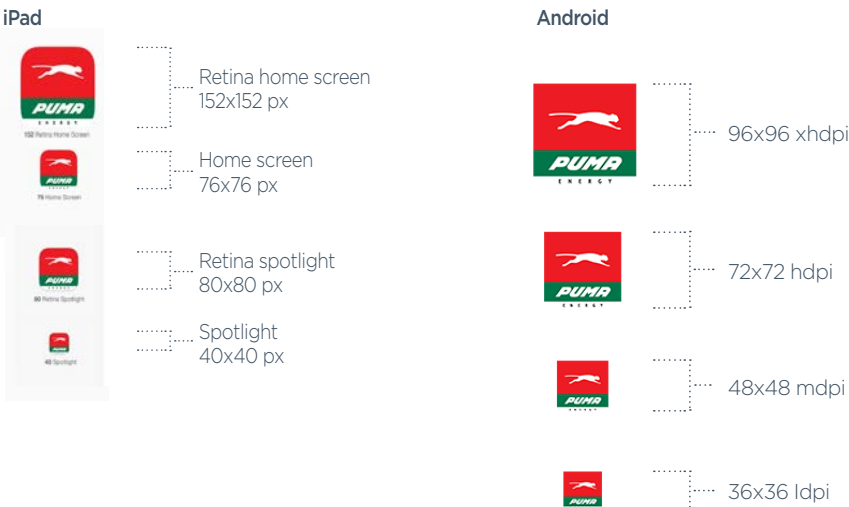

Puma Energy app icons
These logos have been developed for use as app icons on iOS and Android digital reader devices.

1 Puma Energy iOS app icon
These logos are only for Puma Energy iOS apps and not for representing the Puma Energy logo in any other format.

2 Puma Energy Android app logo
These logos are only for Puma Energy Android apps and not for representing the Puma Energy logo in any other format.

2.3

Applying the brand

Corporate stationery

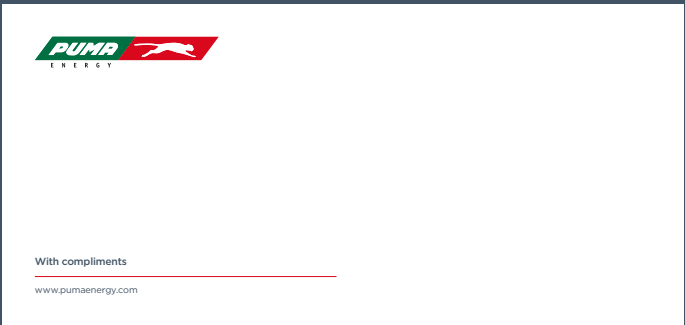

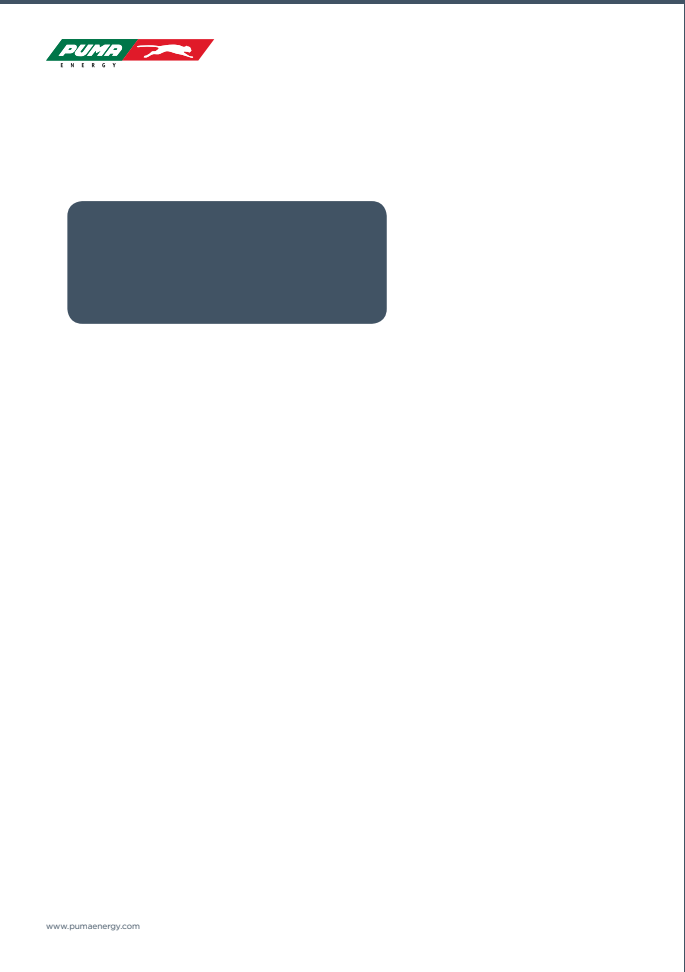

1 Corporate stationery suite

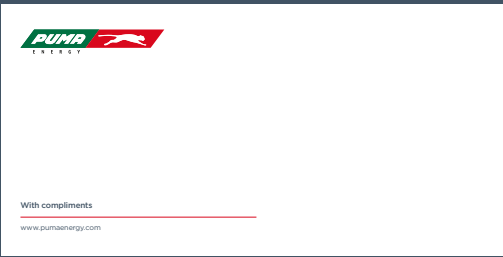

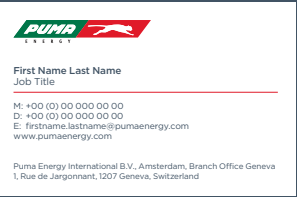

Design to follow a layout that ensures consistency across the brand, utilising the core brand font of Gotham through typographic hierarchy.

Start of letterhead should be typeset at 106.5mm from top which falls below a 1/3 when folded. Back of letterhead to remain blank to ensure printer capability. All creative to be printed four colour.

Templates can be found on Puma World.

2 Envelopes
Templates created in C4, C5 and DL spec. Window placement for reference only. Clear space to the right hand side for franking and postage details.
